

# Prostate-Specific Antigen (PSA) Test For Prostate Cancer Detection

- The PSA test measures the level of PSA in your blood. PSA or prostate specific antigen is a protein made by your prostate gland that naturally spills into your bloodstream. This protein turns semen into liquid.
- Prostate cancer is 100% treatable if detected early.

## Lab Genetix (LG-PC) Test Gives You Information No Other Test Can!

- Helps in determining your course of treatment.
- Helps you make better-informed decisions.
- Gives you and your doctor more confidence in your treatment decision.

## Did you Know!

### 1. 17 genes

that run in families have been discovered that have overlap from prostate cancer to other cancers.

### 2. Since 1993

Deaths from prostate cancer have been cut in half.

- ### 3.
- If the prostate cancer is caught at an early stage, most men will not experience any symptoms.

Depending on your situation, we'd like to ensure we show you the most relevant information possible.

## 1 What is prostate?

- The prostate is a small gland in the pelvis found only in men. Prostate cancer can develop when cells in the prostate gland start to grow in an uncontrolled way. The main function of the prostate is to help in the production of semen.

## Potential Benefits of Testing Prostate-Specific Antigen 4

Testing with Lab Genetix adds a new level of confidence when determining the best treatment option.

### REASSURANCE

- If the PSA test result is normal or very low, this can provide reassurance.

### EARLY DETECTION

- When it is still confined to the prostate gland, there is an opportunity to commence early treatment.

### EARLY TREATMENT

- Early treatment may cure the disease, and thus avoid loss of quality of life due to advanced prostate cancer, and death from prostate cancer.

## 2 Why Choose Lab Genetix?

The most important service we can offer you is peace of mind.

- Prostate problems don't need to be a worry as we can help reassure you through our early detection screening.
- For more information about our prostate cancer screening and PSA tests, book an appointment with Lab Genetix or call us for a free quote.

## 3 Who Is At Risk?

- **You are aged 50 or over** – it mainly affects men over 50 and your risk increases with age
- **Your father or brother has had it** – you are two and a half times more likely to get it.
- **Screening should be done yearly** –for men whose PSA level is 2.5 ng/mL or higher.
